

What is claimed is:

1. A condom comprising:

a sheath formed of flexible material, said condom comprising a body having an open end and a closed end; and

magnetic material disposed in said flexible material adjacent said open end.
2. The condom of claim 1, said closed being free of said magnetic material.
3. The condom of claim 1, said magnetic material comprises particulates.
4. The condom of claim 3, said particulates comprise a ferrometallic material.
5. The condom of claim 1, said condom further comprises a rib formed at the open end, said magnetic material being disposed in said rib.
6. The condom of claim 5, said magnetic material comprises a metal ring.

7. The condom of claim 1, said magnetic material comprises magnetized ferrometallic particulates embedded in the sheath.
8. The condom of claim 6, said ring being split so as to be expandable with flexure of the rib.
9. A condom comprising:
a flexible polymeric material sheath having a body portion and an open end and a closed end, and a rare earth metal magnet embedded in the condom adjacent the open end.
10. A packaged condom comprising:
a condom comprising a sheath formed of flexible polymeric material, said condom comprising a body having a closed end and a open end, and further comprising magnetizable material disposed in the polymeric material; and said condom being disposed in a package, said package including a magnet, said magnet and condom being disposed so that the magnetizable material is magnetized by the magnet.
11. The packaged condom of claim 10, said magnet comprises a permanent magnet.

12. The packaged condom of claim 11, said permanent magnet comprises a rare earth metal magnet.
13. The packaged condom of claim 10, said magnetizable material comprising ferrometallic material.
14. The packaged condom of claim 13, said ferromagnetic material comprises particulates embedded in the polymeric material.
15. The packaged condom of claim 10, said polymeric material comprises latex.
16. The packaged condom of claim 10, said package further comprises means for holding the magnet, said package comprising non-magnetizable material.
17. The packaged condom of claim 10, said condom closed end being free of magnetizable material.

18. The packaged condom of claim 10, said condom further comprising a rib formed at the open end, and said magnetizable material being disposed in said rib.
19. The packaged condom of claim 18, said magnet comprises a permanent magnet;
20. The packaged condom of claim 19, said permanent magnet comprises a rare earth metal magnet.
21. The packaged condom of claim 18, said magnetizable material comprises a ferrometallic ring.
22. The packaged condom of claim 10, further comprising a second magnet, and means for holding said magnets in said package so the magnets are facingly disposed with the condom disposed between the magnets.
